Professional Profile

Experienced civil engineer, holding a ten years GCC experience, with a strong sales & marketing skills along with an excellent technical background in the construction field of all types of structural steel & reinforced concrete buildings (Residential, commercial & industrial).

I worked for a contracting company in Palestine immediately after graduation in the field of the concrete construction, I gained a good experience as a site civil engineer up to 2012, after that I moved to KSA & joined IBSF as a sales & project engineer.

Working for a high-end company specialized in field of structural steel (International Building Systems Factory – Astra Industrial Group) for over 10 years at central & western region in KSA, gave me the ability to build a wide business relations network, improve my marketing/sales skills, in addition to enhance my technical knowledge, all of the aforementioned helped to achieve my sales target with a good profit margin, improve my company picture, acquiring a new customers and retaining an existing one & to complete assigned tasks in a timely and efficient manner.

At the beginning of 2018, top management decided to relocate me to Jeddah Area to support the sales team there acting as a senior sales engineer, IBSF presence was very weak in this area, we worked hard with all customers/end clients/consultants to enhance & build a new bright picture to IBSF.

At the beginning of 2021, top management has relocated me to join Riyadh sales office to lead & manage the sales team acting as an area sales manager.

During my service, we were able to achieve our given sales target & we have been awarded an iconic project.
