### **~ DIRECTOR OF PROJECT MANAGEMENT ~**

As a licensed Professional Engineer in the US, Canada, the UK, Europe, and Australia, I bring a global perspective and a diverse skill set to designing and managing large-scale projects. My skill set is rooted in a deep understanding of structural dynamics and material behavior, enabling me to develop innovative, safe, and cost-effective design solutions. My project management capabilities encompass the entire project lifecycle, from initial conception to successful completion. I excel in developing and implementing efficient construction methodologies, ensuring projects are executed with precision from conception to completion while ensuring compliance with regional standards and practices. My experience includes managing large-scale projects, where I effectively handle budgeting, negotiating, and managing suppliers and vendors, ensuring a smooth supply chain and project progression. My ability to coordinate multidisciplinary teams and stakeholders has consistently resulted in projects that not only meet but exceed expectations in terms of quality, safety, and efficiency. This blend of advanced structural engineering skills, coupled with comprehensive project management expertise, positions me as a leader in the field, capable of delivering projects that are not only structurally sound but also innovative and aligned with modern engineering trends.

*Proven expertise in:*

- Structural Engineering
- Project Management
- Seismic Design Expertise
- Budgeting and Financial Oversight
- Risk Management and Mitigation
- Supply Chain and Logistics
- Construction Planning
- Supplier and Vendor Management
- Multidisciplinary Team Leadership
- Operational Leadership
- Advanced Structural Analysis

---

### **EDUCATION & CERTIFICATION**

|                                                                            |                 |
|----------------------------------------------------------------------------|-----------------|
| <b>Master of Business Administration</b>                                   | 2025 (expected) |
| University of Nevada Reno                                                  |                 |
| <b>Master of Engineering in Civil Engineering (Structural Engineering)</b> | 2013            |
| Ain Shams University                                                       |                 |
| <b>Bachelor of Science in Civil Engineering (Structural Engineering)</b>   | 2008            |
| Ain Shams University                                                       |                 |
| <b>Registered Professional Engineer in AL, NV, and TX (P.E.)</b>           | Active          |
| <b>Registered Professional Engineer in Saskatchewan (P.Eng.)</b>           | Active          |
| <b>Registered Chartered Engineer in the UK (CEng)</b>                      | Active          |
| <b>Registered Chartered Engineer in Australia (CPEng)</b>                  | Active          |
| <b>Registered European Engineer (EUR ING)</b>                              | Active          |

## WORK EXPERIENCE

### **OSF ENGINEERS – [Reno, NV, USA]**

*January 2024 [under establishment]*

#### **Principal / Director of Project Management**

### **DYNAMIC ISOLATION SYSTEMS (DIS) – [Reno, NV, USA]**

*January 2022 – December 2023*

#### **Engineering Manager / Project Manager**

As a Senior Engineer/Engineering manager with a strong focus on project management, I have been responsible for leading key structural projects within our company. My role involves the detailed design and analysis of various structures, ensuring they meet the highest standards of safety and efficiency. I actively participate in all phases of project development, from initial concept to final execution, leveraging my technical expertise to solve complex engineering challenges. In addition to my engineering responsibilities, I manage project timelines, budgets, and resources, ensuring each project is completed on schedule and within financial constraints. I work closely with multidisciplinary teams, coordinating efforts and communicating effectively to align engineering solutions with broader project objectives. My role also includes mentoring junior engineers, sharing knowledge and experience to enhance team capabilities.

#### ***Key Contributions:***

- Developed qualification process for steel suppliers that was successfully applied to qualify steel vendors in the US, Canada, India, Egypt, and Turkey
- Developed production workflow to reduce production cost by 30%
- Coaching and mentoring a team of 10 engineers, drafters, and technicians.
- Successfully managed and delivered 10+ large-scale projects, with average budgets of \$1 million to \$5 million, within the allocated time frame and budget.
- Implemented cost-saving strategies that reduced project expenses by 20% without compromising on quality or safety standards.
- Maintained a high stakeholder satisfaction rate through effective communication, timely updates, and by consistently meeting project specifications and expectations.
- Led a team of 25+ engineers, drafters, and technicians, achieving a 30% improvement in team productivity and efficiency through targeted training and development programs.
- Engineered a unique steel framing technique for lifting and locking of heavy steel platforms that was subsequently adopted company-wide.

### **HORIZON ENGINEERING SOLUTIONS – [Cairo, Egypt]**

*August 2013 – December 2021*

#### **Director of Engineering and Projects**

As the Director of Engineering and Project Management at Horizon Engineering Solutions, I have played a pivotal role in designing and overseeing a broad spectrum of specialized structures for oil & gas offshore projects. My expertise has been central to the successful completion of projects in various countries including the US, Australia, Denmark, Italy, Angola, South Africa, Malta, Saudi Arabia, Bahrain, Algeria, Tunisia, Egypt, and others. In addition to managing the strategic planning and operational execution, I personally designed and managed complex offshore structures, ensuring each project met the highest standards of safety and efficiency. My work has involved critical engineering analyses, such as dropped object analysis, fatigue analysis, and crack propagation analysis for leg structures, essential for maintaining structural integrity in challenging marine environments. I have been responsible for the design and managing of structures like Lifeboat/FRC Platforms, Conductor Tensioning Platforms, Smit Brackets, and Helideck Structural Analysis, among others. My commitment to quality assurance, safety, and operational effectiveness has been unwavering, and I have played a significant role in mentoring and developing our engineering team. This

## AHMED M. IBRAHIM (P.E., P.Eng., CEng, EUR ING, CPEng)

hands-on approach in the design and project management has been key to Horizon Engineering Solutions' successful delivery of complex and varied projects on an international scale, solidifying our reputation in the global oil and gas industry.

### ***Key Contributions:***

- Conducted 50+ on-site inspections and tests, ensuring projects complied with specifications and contract requirements.
- Successfully conducted a critical structural analysis for the helideck of Rig Transocean Amirante, proving its capacity to withstand a helicopter MTOM of 9.3 Tons. This analysis, involving comprehensive finite element modeling and manual engineering calculations, led to approval and certification by Det Norske Veritas (DNV), thereby safeguarding a significant drilling contract in Libya. This analysis helped the client to close a deal of \$270,000/day for two years.
- Successfully executed the structural engineering for the upgrade of lifeboat platforms on Rig Bennevis, enabling the installation of larger capacity lifeboats to meet new design code requirements. This critical upgrade, involving complex finite element analysis and structural design, was approved by the American Bureau of Shipping (ABS) and significantly enhanced the rig's market competitiveness, securing a new drilling contract. This analysis helped the client to close a deal of \$90,000/day for three years.
- Engineered an innovative Centurion Tool Transfer System for Rig Maersk Discoverer, enhancing operational efficiency in drilling 12 wells within a strict timeframe. My structural analysis and design, approved by the American Bureau of Shipping (ABS), included complex lifting systems and finite element models, significantly reducing equipment transfer time and contributing to the successful completion of a major contract with British Petroleum. This achievement was recognized as a significant efficiency improvement in the industry by reducing the cycle time from 24 hours to 0.5 hour and consequently saved \$4.2 million for the client.
- Conducted comprehensive feasibility analyses for over 100 major projects, balancing technology needs, resource availability, and market demand for viable project execution.
- Prepared and managed budgets for various projects, with individual budgets reaching up to \$50 million, showcasing consistent financial efficiency and cost-effectiveness.
- Directed the review and approval of 150+ engineering designs and drawings, ensuring adherence to strict regulatory standards and safety protocols.
- Evaluated and optimized the design of 85+ engineering systems, prioritizing operational efficiency, safety, and cost reduction.
- Mentored and managed a team of 20+ engineers and support staff, fostering professional growth and continuous learning.

### **TRANSOCEAN DEEPWATER DRILLING – [Cairo, Egypt]**

*July 2009 – August 2013*

#### **Senior Structural Design Engineer**

At Transocean, my tenure was marked by significant contributions to offshore drilling projects, emphasizing operational excellence and innovation. As a member of a dynamic engineering team, I was deeply involved in enhancing drilling efficiency and safety, playing a crucial role in project planning, execution, and management. My expertise in marine engineering and deepwater drilling technologies enabled me to effectively address complex technical challenges. My role also included collaboration with cross-functional teams to ensure adherence to industry regulations and environmental standards, demonstrating a commitment to sustainability and safety. This period at Transocean was instrumental in honing my skills in high-pressure environments, managing risk, and driving continuous improvement in offshore operations.

# AHMED M. IBRAHIM (P.E., P.Eng., CEng, EUR ING, CPEng)

## **Key Contributions:**

- Spearheaded multiple offshore drilling projects, leading to significant improvements in operational efficiency and safety.
- Played a vital role in the development and implementation of innovative drilling technologies, enhancing overall project effectiveness.
- Successfully managed cross-functional teams, ensuring seamless collaboration and adherence to strict industry and environmental standards.
- Pioneered initiatives focused on risk management and safety protocols, reducing incident rates and enhancing crew safety.
- Contributed to strategic project planning and execution, consistently delivering projects on time and within budget constraints.
- Actively participated in the continuous improvement of drilling processes, setting new benchmarks for operational excellence.
- Demonstrated strong problem-solving skills in high-pressure environments, effectively managing technical and operational challenges.

## **TEBR CONSULTING – [Cairo, Egypt]**

*July 2008 – June 2009*

### **Junior Structural Design Engineer**

As a Junior Structural Engineer at TEBR, I was intricately involved in the design of reinforced concrete structures, including villas, hotels, malls, and high-rise buildings. In this role, I contributed to the development of detailed structural plans, collaborating closely with senior engineers and project teams. This period was marked by intensive learning and application of advanced engineering principles, ensuring adherence to both architectural integrity and engineering standards in every project.

## **Key Contributions:**

- Assisted in the design and development of various reinforced concrete structures, playing a key role in projects such as residential villas, commercial malls, and high-rise buildings.
- Collaborated with a team of engineers, contributing to the application of innovative design techniques in concrete structures.
- Worked closely with multiple departments including architectural, engineering, and construction teams, contributing to the cohesive execution of design plans.
- Supported the implementation of efficient design tools and methods, contributing to a 15% improvement in project delivery efficiency.
- Played a part in enhancing client satisfaction by ensuring the structural designs met both aesthetic and functional requirements within the set budgets and timelines.
